Dmitrii Gaidarji

Full Stack Developer with a decade of experience building high-stakes, data-intensive applications for global organizations. Specializing in architecting advanced search and discovery systems that leverage the relational intelligence of Neo4j, the scale of Elasticsearch, and the semantic depth of LLM embeddings to turn massive datasets into navigable insights, paired with expert-level D3.js visualization skills.

WORK EXPERIENCE

J. Bridge, LLC

AI Integration / Fullstack Developer   Oct 2025 - Nov 2025

- Engineered and automated document processing pipeline that synthesizes key insights from high-volume PDF and PPTX files into standardized, business-ready PDF reports.
- Integrated Zoho CRM APIs to automate the generation of accurate invoice reports, eliminating manual data entry and ensuring data consistency across financial workflows.
- Leveraged Power Automate to architect an intelligent email-parsing workflow that detects meeting requests and automatically synchronizes scheduling with business calendars.

Brokermate

Consultancy - AI / Fullstack Developer   Jun 2025 - July 2025

- Engineered a real-time Conversational Voice AI using VAPI to automate inbound/outbound call handling; implemented seamless Speech-to-Text (STT) transcription and LLM-driven response generation to deliver a natural voice assistant experience.

LottieFiles

Consultancy - Fullstack Developer   March 2025 - June 2025

- Optimized PostgreSQL indices and EdgeDB queries to enhance database performance and reduce query execution times.
- Conducted in-depth reviews of Honeycomb logs to identify bottlenecks and improve system reliability.
- Updated and enhanced Node.js codebase to improve functionality and maintainability.
- Implemented comprehensive tests to ensure code quality and system stability.

Pfizer

Full Stack Developer   Sep 2018 - December 2024

- Developed an app that monitors the manufacturing processes across the company's plants all over the world and projects their completion dates on an interactive timeline.
- Developed a Google-like search engine powered by Elasticsearch to index and display the internal company data.
- Developed a GraphQL Database API interface for a Neo4j database to be accessed by agents with different permission levels.
- Developed chart-type applications, such as pie charts and Sankey diagrams, to display complex graph data in an interactive one-way flow with filtering capabilities and animations.

POINT DUME (HK) Limited

Full Stack Developer   Sep 2016 - Sep 2018 (2 years 1 month)

- Developed an interactive React-driven customer web portal for accessing live accounting data cached using Redis/Redux and visualized with D3.js.
- Created and set up multiple standalone back-end systems to maintain a REST API for a mobile application using Django.
- Helped to organize hotspot certificate authentication using Java EJBCA service.
- Developed the full-stack using React, Django, Gunicorn, Nginx, Redis, and MariaDB.

EDUCATION

Higher School of Economics

Bachelor's degree, Business informatics   2012 - 2016

PROJECTS

Neo4j Browsers   2023

- Neo4j Browser is the general purpose user interface for working with Neo4j. Query, visualize, administrate and monitor the database.
- Fork of an official repository: https://github.com/Pfizer-Digital-Manufacturing/neo4j-browser
- Own 3D browser: https://github.com/dmitriigaidarji/neo4j-browser-3d
